

COOLANT REVIVE

Coolant in the automotive cooling system requires periodic replacement, if the coolant has not been replaced for a number of years, there is a high possibility of cooling and engine system damage.

TCL Coolant Revive contains 4 times more anti-rust and anti-foaming agents compared to ready to use type coolant. By simply adding TCL coolant revive to old coolant in the cooling system, the coolant will perform and protect to near the same level as new coolant.

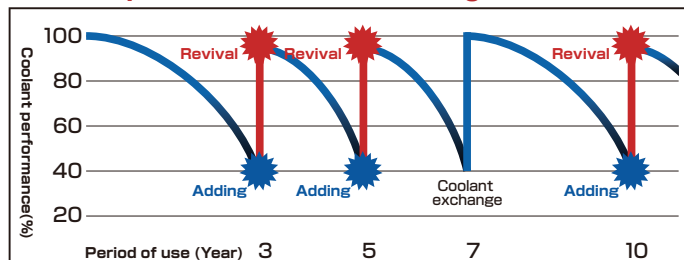

How to use

Add 1 bottle (300ml) of COOLANT REVIVE for 6-7 L coolant. It can also be used with the long life coolant.

Precaution for use

Please check the cleanliness of the radiator before use. In case radiator inside is very rusty and coolant are discolored extremely, this product can't give full performance. Change all coolant and add this item.

Coolant performance revival image

Foam is enemy in cooling system
Deterioration of the coolant can not be judged only by the color!

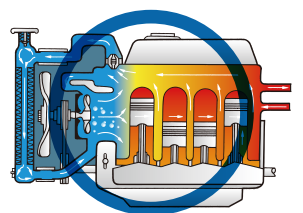

BEFORE

Foam is generated by the vibration and rotation of the blades of the water pump. Heated foam interfere with the circulation of the coolant. Temperature of the engine is increased, it may cause overheating.

AFTER

Bubbles will not occur due to the anti-foaming agent and coolant will circulate in the cooling system smoothly leading to lower water temperature which in turn also reduces the deterioration by heat to the anti-rust agent.

Product Specifications

Size of a piece	5.2 x 5.2 x 19.5 cm
Size of a cargo box	25.5 x 25.5 x 23 cm
Quantity	16 pcs
Weight of a piece	0.4 kg
Weight of a cargo box	7 kg
